Cellulite – visible and long-lasting treatment success

Skin elasticity decreases with age. The typical orange peel appearance on thighs, buttocks and upper arms affects 80% of all women. Cellulite has become a big issue in our affluent society and thus has a significant impact on the quality of life and joy of living.

»Acoustic Wave Treatment« – abbreviated as »AWT™« – is a modern, highly effective treatment method characterized by the application of acoustic sound waves to the affected body regions. This innovative treatment method is chosen by an increasing number of women as a preventive treatment to reduce their susceptibility to cellulite or to reverse and eliminate visible signs of cellulite.

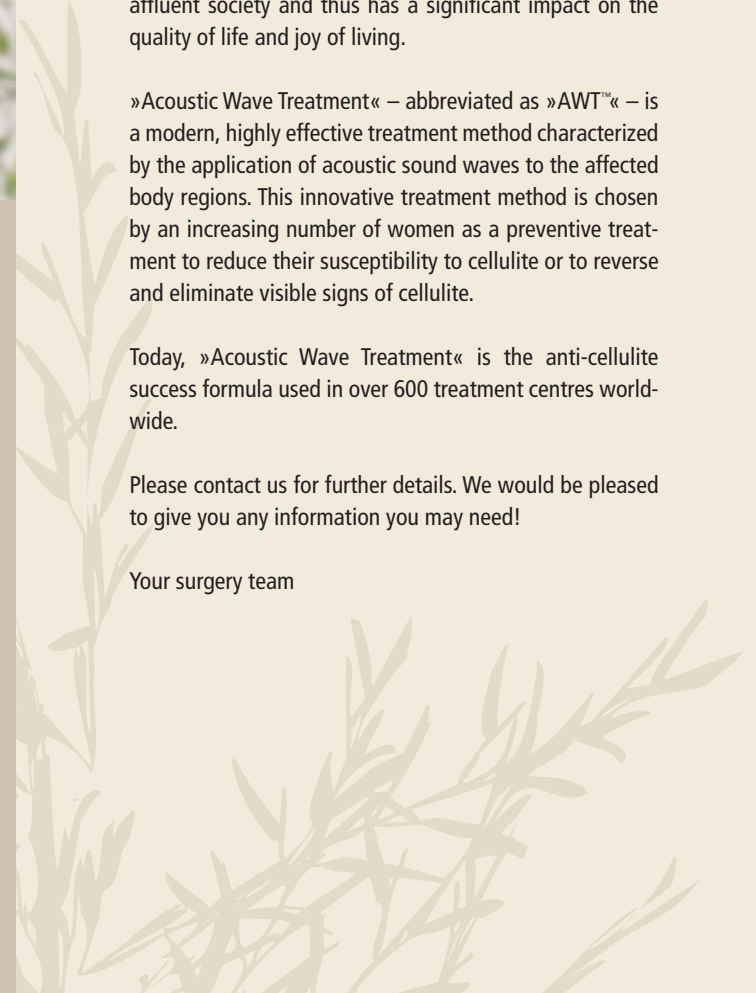

Today, »Acoustic Wave Treatment« is the anti-cellulite success formula used in over 600 treatment centres worldwide.

Please contact us for further details. We would be pleased to give you any information you may need!

Cellulite

What is the solution?

Cellulite – the fight for smooth skin

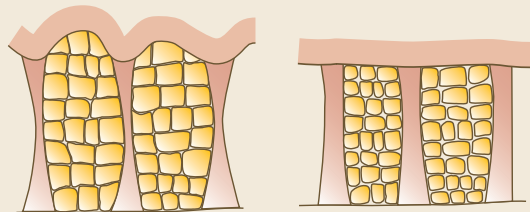

Successful cellulite treatment with »AWT™«

Cellulite typically appears on the thighs, buttocks and upper arms. The connective tissue is soft and elastic and exhibits a wide-meshed network of collagen fibres to enable stretching during pregnancy. An imbalance between fat production (lipogenesis) and fat breakdown (lipolysis) within the cells leads to the formation of large fat cells that are typical of cellulite, giving the skin the typical dimpled orange peel appearance.

Skin with cellulite – Skin without cellulite

What is »AWT™« and why is it effective in cellulite treatment?

»Acoustic Wave Treatment« uses acoustic sound waves which are gently introduced into the affected body regions. Acoustic waves have been used in medicine with great success since 1980 for the disintegration of kidney stones and since 1990 for the treatment of tendon and muscle disorders.

Modern cellulite treatment applies acoustic sound waves to cellulite regions.

The results are:

- ▶ skin smoothing and rejuvenation
- ▶ breakdown of fat deposits
- ▶ connective tissue tightening and improved retention of fat cells in the subcutis
- ▶ reduced circumference of affected body regions (»Slimming«)

Measurable and visible results

Studies conducted in Switzerland, Germany and the US have shown a 110% improvement in skin elasticity in the female patients treated. All patients participating in the study were highly satisfied with the »Acoustic Wave Treatment«.

Treatment procedure

Contact gel or skin oil is applied to the treatment region to ensure that the acoustic sound waves are introduced into the body without energy loss. Treatment is completely painless.

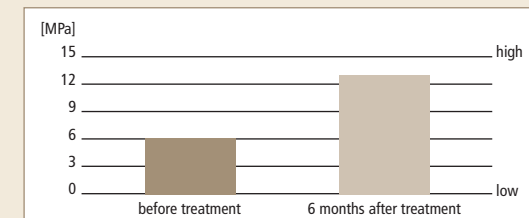

Treatment duration and frequency

On average, each cellulite treatment session takes about 30 minutes. Depending on the degree of cellulite, 6 to 10 sessions at 3 to 4 days intervals may be necessary.

Recommended accompanying measures

»Acoustic Wave Treatment« should be accompanied by 30 minutes physical exercise per day, a low-fat diet and 2 to 3 litres of liquid per day to ensure rapid elimination of waste products.

Skin elasticity

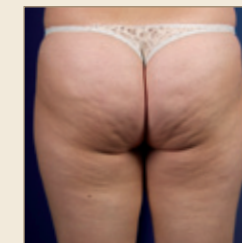

Which body regions can be treated?

»Acoustic Wave Treatment« can be performed on patients of any age. It helps the skin regain its natural elasticity and firmness, improves the figure and reduces the circumference of the treated body regions.

Treatment areas

- ▶ buttocks
- ▶ upper arms
- ▶ thighs
